Smart Vision for Contrac

- Graphical user interface

Save & Restore für Contrac

- Software tool to read / write the actuator software
- Storage of actuator data
- Set-up of electronics ready for operation with previously saved data
- Reduces the number of stock devices
- Actuator is ready for operation without new set up
- Password protected data groups can be read or written individually
- Operating system MS Windows 3.x / 9X / NT

Information about technical features, ordering information, price and delivery time see data sheet 10/63-1.20 EN

Save & Restore

General

The service tool "Save & Restore" is used for loading and reading the operation software for Contrac actuator electronics. The data can be stored or can be transferred into other electronics. This enables an exact copy of a certain actuator configuration ("clone"). Once the data are loaded, the actuator is ready for operation with the previously adjusted parameters. An additional adjustment, e. g. selection of the operating range is not necessary.

Installation

Installation and operation require MS Windows® 3.x, MS Windows® 95/98 or MS Windows®NT. The connection between actuator and PC / Notebook is done via a RS 232 interface and a PC connection cable (cross-over cable) with 9-pole sub-D female socket and 9-pole sub-D male plug.
